Emily Zielinski Gutierrez, DrPH, Director, CDC Central America Region: When we think about the people who are affected by HIV in Central America these are often really marginalized populations.

Dr. Lyla Vicente, Clinic Doctor, VICITS: I see how a person infected by an STI for a long time becomes sooner or later, HIV positive.

Zielinski Gutierrez: The US and CDC through the PEPFAR program have worked to ensure that people with HIV can receive life-saving treatment.

Vicente: Some reagents that sometimes the Ministry of Health cannot buy CDC buys them, all this helps the most needed population.

Brian, Patient, HIV Prevention Clinic: I think I would not feel comfortable in another space being able to express how I am or what practices I have. I would hide certain information that is relevant for healthcare so maybe I could not say in another space.

Zielinski Gutierrez: We're part of a solution that might not happen if we weren't there.
